

The William J. Hughes Technical Center

INVITES YOU
to the

SPEAKERS SERIES Presentation by:

Professor Larry Bernstein

Industry Research Professor
Stevens Institute of Technology

Topic: In Software We Trust?

An emphasis on software trustworthiness would hold developers and companies accountable for their products. Clearly, it's an idea whose time has come--are we ready for it?

Prof. Bernstein, formerly executive director at Bell Labs, is now the director of the New Jersey Center for Software Engineering at Stevens. In addition, as a member of the Center for National Software Studies, he's vitally concerned about the state of software reliability, security, and safety---three attributes that he feels defines trustworthiness.

Much of FAA activities relies on software that is "trustworthy." Join us to hear about an area of concern to the U.S. Congress, industry, and government agencies and that may foster a new round of innovation and competitiveness in United States software technology.

Technical Center Auditorium

Wednesday, November 17, 2004
10:00 a.m. – 11:00 a.m.
